XpoLog Automatic Log Analysis Technology™

Accelerating Applications Problem Isolation™

- XpoLog Center is a software solution that helps applications teams to quickly identify problems being created during the application life cycle.
- XpoLog is a focal point to automatically investigate and access critical application log data.
- Advanced Content Analysis and Correlation technology helps to identify problems that other wise would go unnoticed.
- XpoLog help to un-lock the great troubleshooting information that hides in applications logs.
- Application teams get an agent-less proactive assistance that helps to free time for innovation and reduce downtime of business applications.

The Problem IT Problems Effects Business Availability

Identifying and resolving problems is a time consuming task. During applications execution in production, massive amount of log information is being generated.

Information in the logs is critical for identifying problems and then to understand the root cause. Monitoring tools only help in getting a notification that a problem is out there.

Rapidly identifying where the problem is, Efficiently isolating the problem and then Quickly assigning it to the relevant team is a Key for Business Availability.

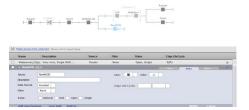

Accelerating the Isolation Process End – To – End

Δ

XpoLog Center software solution provides a focal point for both Operations and Applications to proactively monitor, investigate and identify risks and problems as they are created in IT.

XpoLog helps to improve MTTR and MTBF and contributes to the over all application management strategy. Base on unique non intrusive technology of log and content analysis, XpoLog scans the applications data and provides top level behavior reports.

XpoLog correlates all available data automatically and presents application status in context of applications, transactions or scheduled tasks.

XpoLog Center Technology

XpoLog reads remote log and IT sources across the network and searches for anomalies, problematic content, transaction problems and predefined rules. All information is correlated and summarized on a single dashboard that allows zooming in to the last log line of a remote application. XpoLog Center also provides investigation and forensics tools and enables IT knowledge collaboration. XpoLog Center is agent-less and non intrusive. This unique technology can process many Giga bytes per hour and automate the problem isolation process.

| op | 10 Cases | | | System Status |

XpoLog Center Key Features

XpoLog Center key features include modules for proactive analysis, problem isolations, log correlation, log analysis, log search engine, reporting engine and proactive monitoring:

Agent-less over SSH, Windows

- Log Viewer for ANY LOG
- Applications Anomaly Detection
- Content and Knowledge Analysis
- Log Correlation Transaction
- Reports Aggregation, Statistics,
- Rules
- Problem Isolation Monitoring
- Web Interface, Cross Platform
- Search Engine
- Enterprise Security Integration
